

DRM walk — every screen, step by step

Before you start — five minutes, once

- 1. On the shop PC, double-click **START.cmd**; it prints the address for the tablet.
- 2. On the tablet, turn **mobile data off** and join the shop Wi-Fi.
- 3. Install the certificate on the tablet once — **server\certs\lan-cert.crt**, as in TABLET_TRUST.md — so the address opens with no warning and the camera and offline mode are allowed.
- 4. Open the address START.cmd printed and accept *Add to home screen*.
- 5. Sign in with the DRM account.

Then go step by step. Each step shows the screen as it should look, the taps in order, what must be on your screen, and what to suspect when it is not. Tick **Seen it** only when you saw it.

- 4.1 – 4.4 · The dashboards
- 4.5 – 4.9 · Oversight — what the DRM can see and cannot do

The dashboards 4.1 – 4.4

Sign in as the DRM. Every figure from the record, with its count.

dashboard

DO

1. Sign in with the account you were given.
2. Tap **DRM Dashboard**. Read the tiles under **Shop Floor — Right Now**.

YOU MUST SEE

- *When does today's pile finish?* — springs per hour and the hours for the shift's pile, with how many sorted over how many minutes.
- *How many bogies can we build right now?* — the number, and which spring position is the limit.
- *What will Stores need this fortnight?* — replacements across so many wagons, with the observed condemnation rate and the number of inspections it rests on.
- *Is the record intact?* — yes, N entries, unbroken.
- None says *Not yet known*.

WHAT IT PROVES

Four questions a DRM actually asks, answered from the record with the basis under each. Where the evidence would be thin the tile says "not yet known" instead of a number — on the demo record it is not thin.

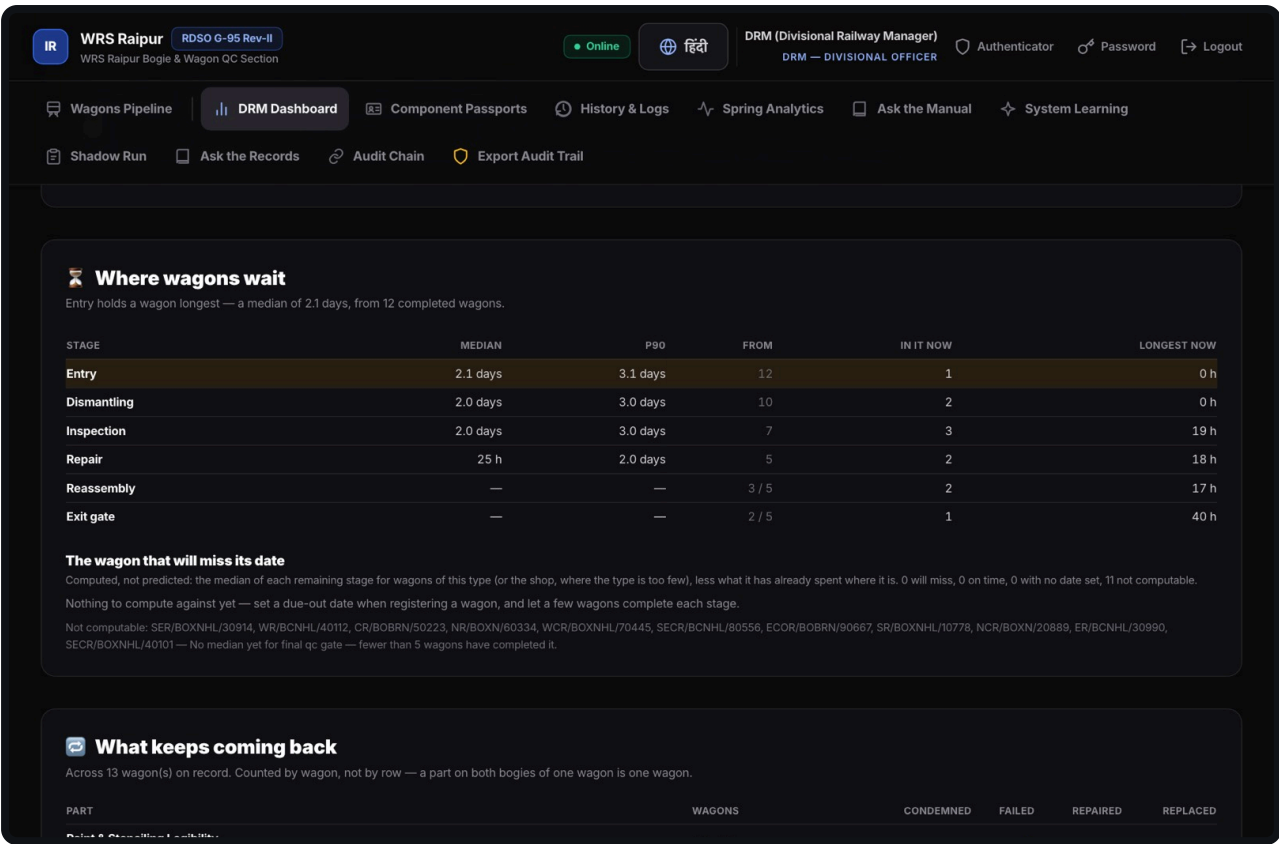

CHECKED ON THE BUILD

verified · 05:07:08 pm

- ✓ the "Shop Floor — Right Now" section
- ✓ when today's pile finishes, with the rate
- ✓ how many bogies can be built
- ✓ what Stores will need
- ✓ none says "Not yet known"

IF IT IS NOT THERE

- A tile says "Not yet known": the bench has too few springs today — sort a few as the inspector first, or re-seed.

dashboard lower

DO

- 1. Scroll.

YOU MUST SEE

- **What a camera could tell an inspector** — blind-read agreement, assembly coverage, the pocket-count dataset: what has been earned and what has not.
- **Where wagons wait** — dwell per stage with the median and the slow stage; **the wagon that will miss its date**, computed from the stages left, not predicted.
- **What keeps coming back** — recurring findings by part and wagon type.
- Turnaround, the band distribution (six colours, the bench included), inspector quality, gauge exposure — every rate with its count.

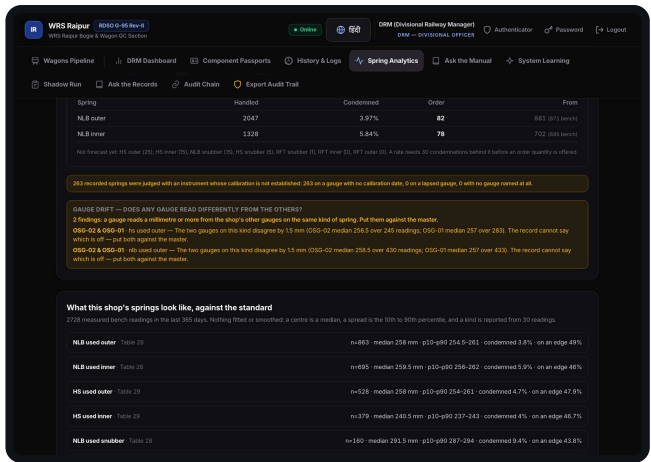

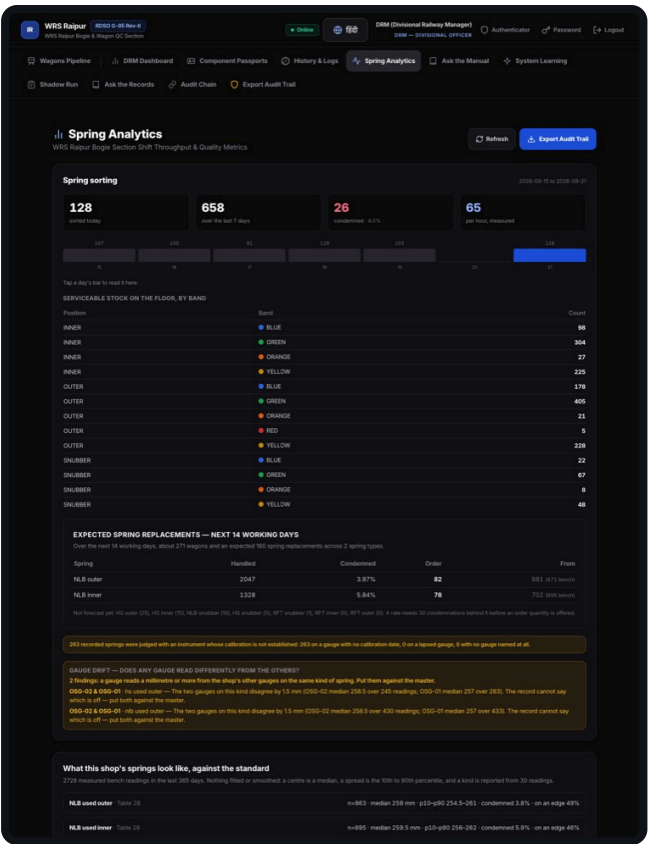

WHAT IT PROVES

Every figure carries its n. Nothing here is a forecast or a model's number.

CHECKED ON THE BUILD

- ✓ turnaround
- ✓ where wagons wait — and the wagon that will miss its date
- ✓ what keeps coming back
- ✓ inspector quality
- ✓ gauge exposure
- ✓ rates carry their counts

verified · 05:07:15 pm

analytics drift

analytics

DO

1. **Spring Analytics.** Tap one of the day bars.
2. Scroll to the standard report and the gauge drift panel.

YOU MUST SEE

- ▶ Bench totals today and this week; tapping a bar reads that day's figures beneath it.
- ▶ Stock by band.
- ▶ **The standard report** — this shop's springs against the G-95 bands, with *n* on every figure.
- ▶ **Gauge drift** names **OSG-02**: the two outer gauges disagree by 1.5 mm — put both against the master.

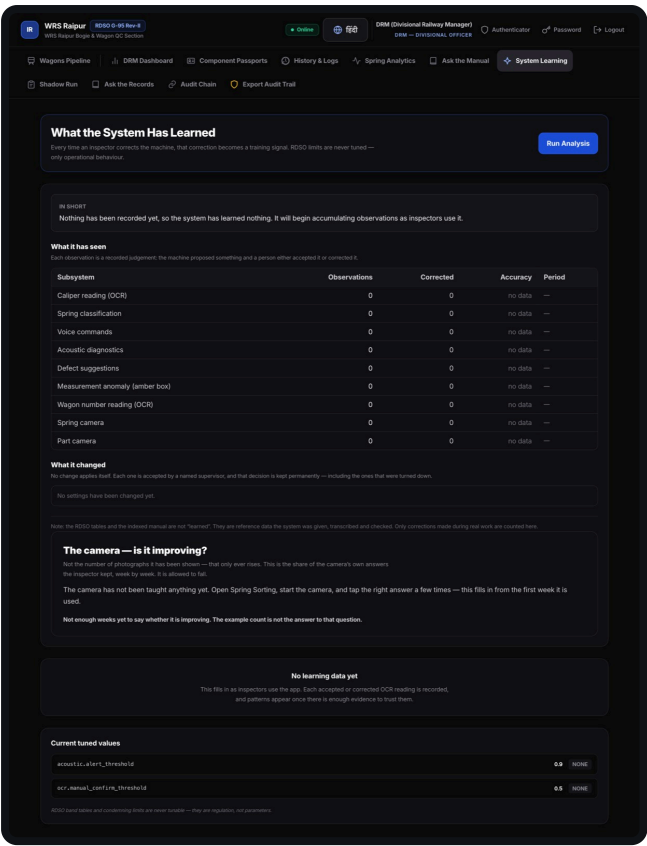

WHAT IT PROVES

The distribution of a shop's springs against the standard is evidence RDSO has never had from a shop; the drift check finds a gauge reading high from the record alone.

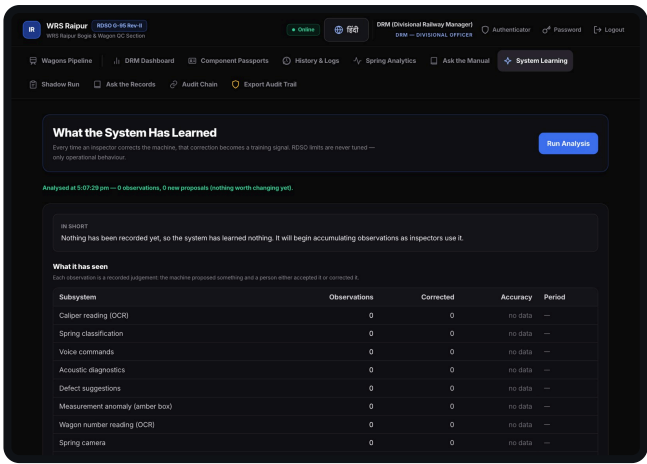

CHECKED ON THE BUILD

verified • 05:07:16 pm

- ✓ bench totals today and this week
- ✓ tapping a day's bar reads that day's figures beneath
- ✓ stock by band
- ✓ the standard report
- ✓ n on the figures (6 found)
- ✓ the Gauge drift panel names OSG-02: "GAUGE DRIFT — DOES ANY GAUGE READ DIFFERENTLY FROM THE OTHERS? 2 findings: a gauge reads a millimetre or more from the s..."

learning

learning ran

DO

1. **System Learning.** Read the table. Tap **Run Analysis**.

YOU MUST SEE

- Each subsystem — caliper reading, spring classification, voice, acoustic, defect suggestions, the amber box, wagon-number reading, spring camera, part camera — with observations, corrections and accuracy. On the demo record: *no data*.
- *The camera has not been taught anything yet.* The server confirms the camera may not sort on its own.
- After **Run Analysis**, a green line: *Analysed at HH:MM — N observations, 0 new proposals (nothing worth changing yet).*
- *RDSO band tables and condemning limits are never tunable — they are regulation, not parameters.*

WHAT IT PROVES

What has been learned is a table with counts, not a claim. No change applies itself; each is accepted by a named supervisor. The standard is never "learned".

CHECKED ON THE BUILD

verified · 05:07:24 pm

- ✓ each subsystem with its observations, corrections and accuracy
- ✓ the camera says it has not been taught anything yet
- ✓ the server confirms the camera may not sort on its own (allowed: ?)
- ✓ after Run Analysis: "Analysed at 5:07:29 pm — 0 observations, 0 new proposals (nothing worth changing yet)."

IF IT IS NOT THERE

- Run Analysis shows an error: the server refused the DRM — report it; it was fixed on 21 Sep.

Oversight — what the DRM can see and cannot do 4.5 – 4.9

Read everything; write nothing.

AMBER BOX ANSWERED

—

0 raised · 0 re-measured · 0 stands · 0 unanswered

ONE WAGON, BOTH WAYS

38 → 31 min

1 paired observation(s) — a large difference is visible, a precise one is not.

• 1 paired timing(s). Enough to notice a large difference, not enough to defend a precise one — say so rather than report a figure the sample cannot carry.

What the app recorded, day by day

Worked time excludes idle gaps over 15 minutes, and is an upper bound on effort.

DAY	WAGONS SWEEPED	SPRINGS	CONDEMNED	NESTS FLAGGED	BENCH MIN	SPRINGS/H	VERDICTS	AMBER RAISED	ANSWERED	DISCREPANCIES

Ask the records

A question about this shop's own records, answered by fixed arithmetic over rows you can see. No model writes a number here.

No model is configured: the matcher alone reads your sentence, offline.

is any gauge reading high

Ask

WHETHER ANY GAUGE READS A MILLIMETRE OR MORE FROM THE SHOP'S OTHER GAUGES ON THE SAME KIND OF SPRING.

question matched offline

OSG-02: Disagrees with OSG-01, the only other gauge on this kind, by 1.5 mm (median 258.5 vs 257, 245 vs 283 readings). With two gauges the record cannot say which one is off — put both against the master. OSG-01: Disagrees with OSG-02, the only other gauge on this kind, by 1.5 mm (median 257 vs 258.5, 283 vs 245 readings). With two gauges the record cannot say which one is off — put both against the master. OSG-02: Disagrees with OSG-01, the only other gauge on this kind, by 1.5 mm (median 258.5 vs 257, 430 vs 433 readings). With two gauges the record cannot say which one is off — put both against the master. OSG-01: Disagrees with OSG-02, the only other gauge on this kind, by 1.5 mm (median 257 vs 258.5, 433 vs 430 readings). ask

DO

1. Ask the Records → is any gauge reading high → How this was computed.

YOU MUST SEE

► OSG-02, by how much, and what the record can and cannot say; the query and the rows.

WHAT IT PROVES

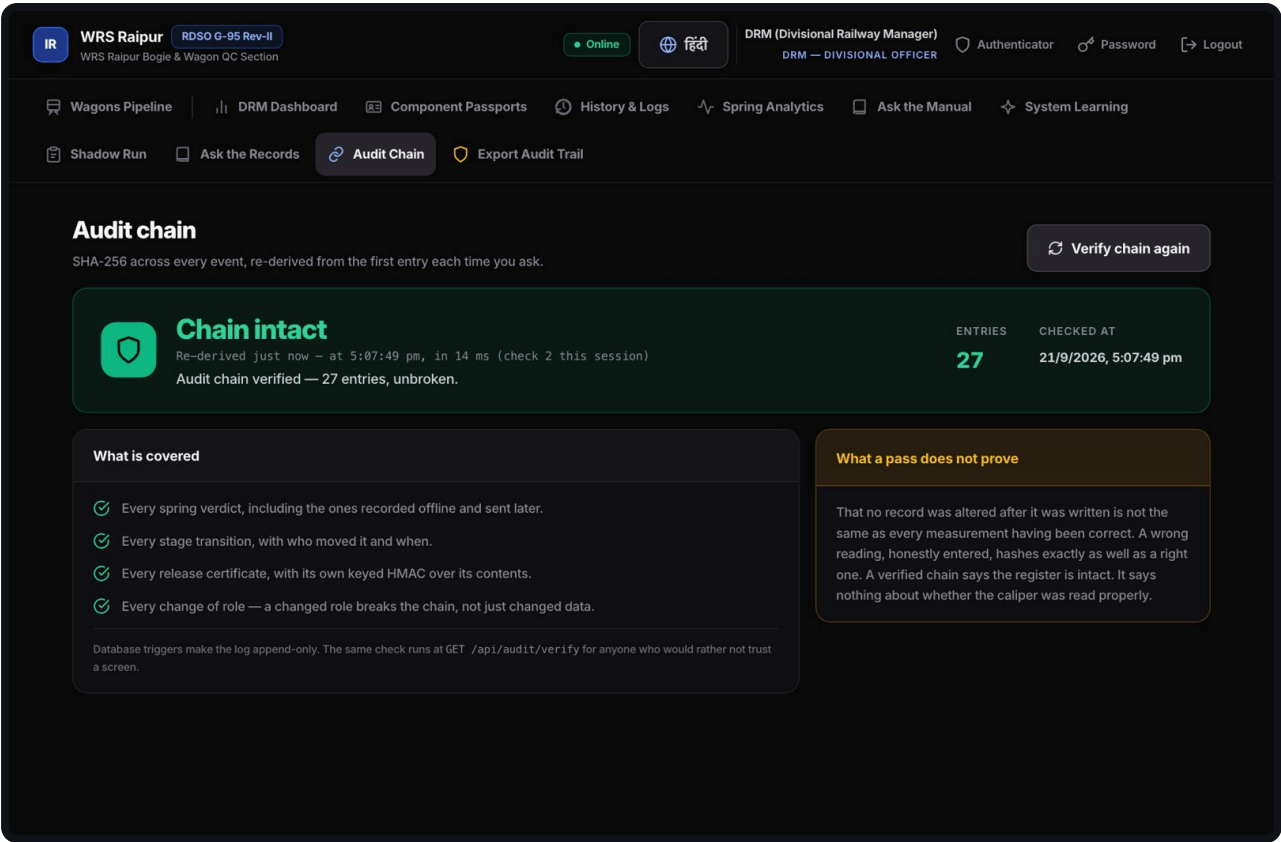

As 3.18 — the DRM can ask the same questions with the same proof.

CHECKED ON THE BUILD

verified · 05:07:37 pm

✓ OSG-02 named

✓ how it was computed, with the rows

audit

DO

1. Audit Chain → Verify chain again.

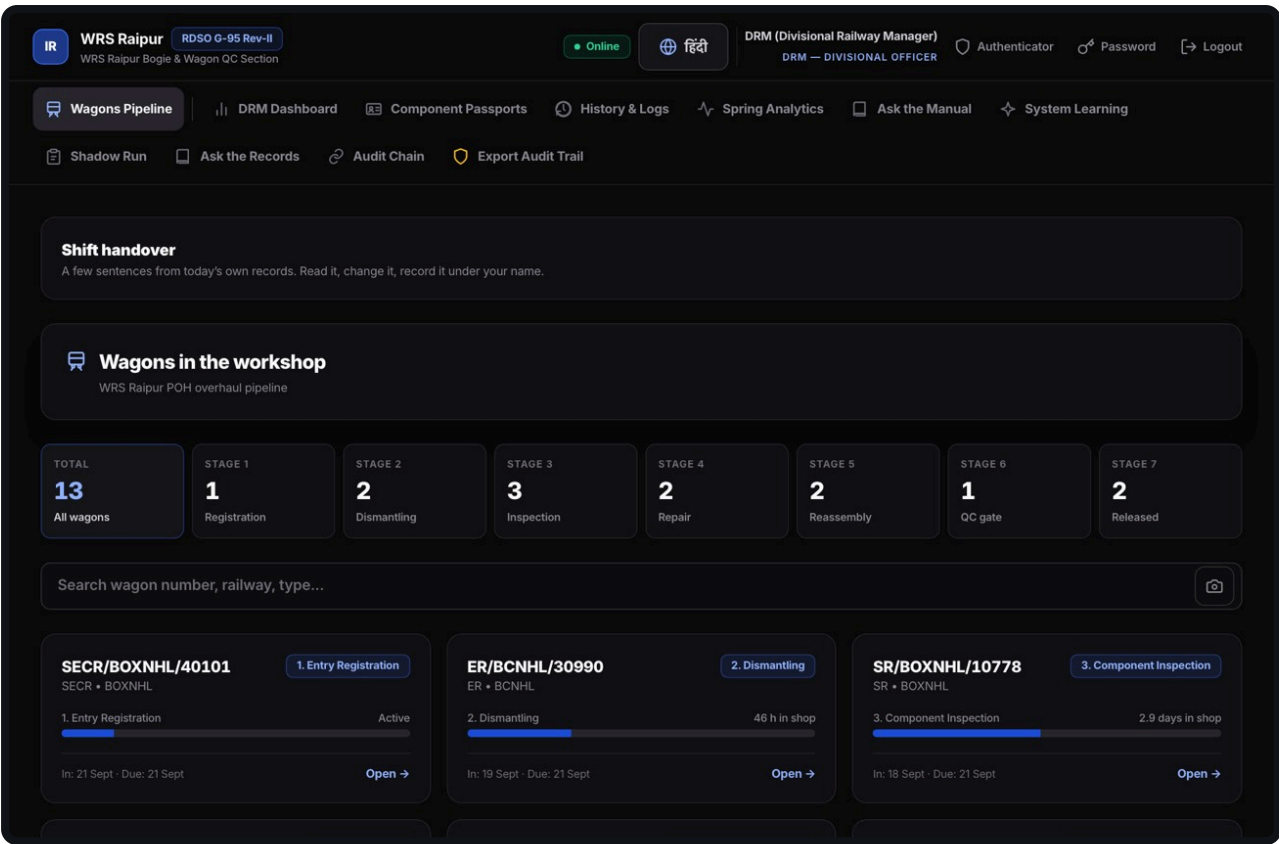

YOU MUST SEE

► **Chain intact**; *Re-derived just now — at HH:MM:SS, in N ms.*

WHAT IT PROVES

The DRM can prove the record unaltered without asking anyone.

CHECKED ON THE BUILD	verified · 05:07:45 pm
✓ "Chain intact Re-derived just now — at 5:07:49 pm, in 14 ms (check 2 this session"	

pipeline drm

DO

1. **Wagons Pipeline.** Look for a Register button.

YOU MUST SEE

- There is **no Register New Wagon button** — and the server refuses the DRM's sign-in for it too (403).
- As a supervisor: a junk number is refused; a wagon registered by mistake is voided with *Registered in error?* — reason, one-time code — and leaves the pipeline while its record stays.

WHAT IT PROVES

The record is always written by the floor. Oversight cannot register or inspect, so a figure on the DRM's dashboard is never the DRM's own entry.

CHECKED ON THE BUILD

verified · 05:07:53 pm

- ✓ no Register New Wagon button
- ✓ the server refuses the DRM's token: 403

IF IT IS NOT THERE

- A Register button on the DRM's pipeline: a permission fault — report it.

☐ Seen it

1. Open **SECR/BOXNHL/10492** → **Release Certificate**.
2. **Scan the QR with the phone** on the same Wi-Fi.

- ▶ The phone opens the verify page and shows **VERIFIED** — the signature checked against the shop's key in the phone's own browser.
- ▶ The same page also takes a certificate *file* with no server at all — what another railway would do.

No login, no server, no trust in this laptop: the certificate carries its proof.

verified · 05:07:57 pm

- ✓ the QR is a link to the verify page
- ✓ the verify page shows VERIFIED: "Verify a release certificate or a wagon passport Checked here, in this browser, with no request to a..."

By hand: The verify page was opened and checked from the laptop; scanning it needs the phone.

- The phone opens the app's sign-in screen instead: the phone holds an old copy of the app — open the address once more and it updates.
